DETAILED ACTION

Allowable Subject Matter

1. Claims 1-17 allowed.
2. Claim 1 recites a "circuit for amplifying an input signal" comprising the recited "power amplifier that receives the input signal and produces and output signal", "power source", "amplitude detector", "current detector", "adder", and "control circuit connected to a biasing pin of the power amplifier".

No prior art was found teaching individually, or suggesting in combination, the combination of claim 1, specifically, an adder for adding the first measurement that corresponds to the amplitude of the output signal with the second measurement that corresponds to current flowing into the power amplifier from the power source and produce a third measurement; and comparing the third measurement to a reference in order to control the output power of the power amplifier based on the comparison.

Agahi-Kesheh (US 6,430,402) disclose a power amplifier saturation prevention method comprising a current detector to measure the current flowing from a power supply, a power detector to measure the power output from a power amplifier and a comparator in which both measured signals are compared to each other.

It can be seen that Agahi-Kesheh's system teaches the use of a measured current flowing from a power source and the measured power output amplifier in order to control the power level of an output signal, however; Agahi-Kesheh lacks the adder for adding both measurements in order to produce a third measurement; and comparing the

Art Unit: 2642

third measurement to a reference in order to control the output power of the power amplifier based on the comparison.

Dacus et al. (US 6,008,698 & US 6,633,750) disclose a RF amplifier circuit in which a sampled supplied current (i.e. current flowing from a power amplifier) is subtracted from the output signal measured from an RF amplifier, the obtained signal is applied to a control terminal controlling the supply currents, however; Dacus et al. –like Agahi-Kesheh lacks the adder that perform the functions stated above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
